

SOLAR WAX MELTER «SOLARIS INOX»

Insulated double wall, with swivel support

Ref. 7150

MAIN ADVANTAGES

- Stainless steel for professional use
- Made In Italy
- Easy to use
- Great Heat Retention
- Easy to Clean

TECHNICAL DATA

- **Manufacture:** stainless steel
- **Max. dimensions:** 700x700x320 mm
- **Wax collecting tray dimensions:** 530x162x100 mm – **capacity:** 6 lt
- **Weight:** 41 kg

DESCRIPTION

The **LEGA solar wax melter "SOLARIS INOX"** is one of the several wax melters made in LEGA.

This model of wax melter is solar, this means that thanks to the sunshine the wax placed inside melts and can be easily collected in the stainless steel tray.

This solar wax melter **can also be used in non-optimal climatic conditions** as it is able to exploit all the solar heat, **without the slightest dispersion**.

The body of the wax melter is made entirely of stainless steel and is **double-walled with an insulated cavity** thereby avoiding dispersion of the accumulated heat and accelerating melting of the wax.

The **inclined plane** for sliding of the wax is also made of stainless steel similar to the **perforated tray** that **retains any impurities** and the large melted wax collection tray.

The "SOLARIS INOX" solar wax melter is fitted with a **swivel support** that allows it to be rotated towards the sun whilst ensuring optimum inclination.
